The 1799 campaign in Italy and Switzerland

Summary Note

"The writings of Carl von Clausewitz (1780-1831) are among the most important works on war ever written. Much of the focus has understandably been on his great theoretical work On War, published in 1832. That work, however, formed only the first three of the ten volumes of his published writings. For Napoleon Absent, Coalition Ascendant, Murray and Pringle have chosen the original version of the text published in 1833 which is the first of the two volumes originally published as Der Feldzug von 1799 in Italien und der Schweiz. In these two volumes, Clausewitz describes and analyses the campaigns of 1799 in Italy and Switzerland, providing a superb history of this episode of the French Revolutionary wars. He covers the campaigns in detail and provides excellent analysis of their events, along with what he identifies as the changes in warfare that rocked Europe from 1792-1815. These campaigns were an important part of the wars of the French Revolution and Napoleonic period, but they have never been covered adequately from a historical standpoint."-- Provided by publisher.

- Subjects:** BIG data, SUPPLY chains, SUPPLY chain management
- Abstract:** This paper presents the knowledge available in the literature regarding big data analytics capability (BDAC) and sustainable supply chain performance (SSCP). A detailed analysis of systematic literature reviews points out the lack of studies bridging these two separate streams of work. The paper puts forward a research agenda for researchers interested in understanding the impact of big data on sustainability. [ABSTRACT FROM AUTHOR]

The present article tackles the issue of political-military leadership and military command within the Warsaw Treaty Organisation (WTO). In this regard, starting from the main aspects included in the founding treaties of the two political-military organisations that dominated the international scene during the Cold War - NATO and WTO, some similarities and differences between the two organisations are presented. Moreover, the two statutes - in peace and in war time, which formalised the main command and control bodies in the WTO, are discussed with reference to the context in which the need for their development and adoption arose. Last but not least, the position adopted by Romania, as a WTO member state, in relation to the command and control mechanisms is reviewed, a position appreciated by researchers in the field as an important contribution to the WTO becoming a modern, mature and multilateral organisation.

Introduction

In the geopolitical and geostrategic context subsequent to the end of the Second World War, also named Iron Curtain, Cold War or bipolar world, with reference to the two existing poles of power - the United States of America and the Union of the Soviet Socialist Republics - two political-military organisations were established: namely the North Atlantic Treaty Organisation (NATO) and the Warsaw Treaty Organisation (WTO).

Title

Humility as a leadership attribute: understanding the effects of humility on military leadership.

Author

Kadel, Jesse N.

Branch/Country

United States Army

Abstract

The concept of humility as a leadership attribute appears in leadership theories and command philosophies throughout the military and is prevalent in many leadership discussions and counseling. But U.S. Army leadership doctrine does not include humility as a necessary characteristic of effective leadership. This study researched the role of humility as an attribute and its effects on military leadership to ascertain the viability of its inclusion in leadership discussions as a vital element of leadership. Four case studies were conducted on prominent military leaders who exhibited humble leader behaviors. George C. Marshall, Oliver P. Smith, Harold G. Moore, and Colin Powell were highly successful and influential leaders whose military careers revealed insight into the effects of humility. Each leader's demonstrated humility enhanced their effectiveness as leaders, enabled them to inspire a higher sense of loyalty and commitment within their respective organizations, and contributed to a higher level of emotional intelligence for each. Additionally, humility enabled leaders to exert long-term influence and contributes to a more positive long-term influence on their organizations.
